

EPA Regulation 325b and How Ormantine USA LTD., Inc Can Help

Who We Are

- Ormantine USA Ltd., Inc. is an Air Quality laboratory in Florida.
- Our laboratory provides passive chemical air testing equipment as well as analysis for our products
- We can monitor for VOCs, Benzene, NO₂, SO₂, O₃, H₂S, NH₃ and Acid Gases
- We are also a distributor of Gastec products

What is 325b

- The Environmental Protection Agency has issued regulation 325A and 325B requiring all refineries to conduct benzene fence line monitoring.
- This regulation indicates Passive sampling onto sorbent tubes which is then analyzed by TD-GC/MS as the standard air monitoring technology for the EPA's proposed rule.
- Depending on the size of the facility and the distance from the community each refinery will be required to have a specific number of monitors around the facility. These monitors will be hung around the perimeter of the facility at specific degree intervals from the emission source. After 14 days of exposure the tubes are to be taken down, resealed and sent back to the laboratory for analysis. At that time a new monitor is to be placed in the shelter ensuring continuous monitoring. Please see the regulation for the specifics.

How We Can Make You Compliant

- Stainless Steel constructed Benzene monitors
- Fence line ability and protective shelters
- Certified Laboratory
- Quick turnaround time on results
- Excellent customer service
- ISO 9001-2016 Certified Company
- Competent personnel
